

BILLIARD BALL RACK

ABSTRACT OF THE DISCLOSURE

A rack for storing billiard balls including a base having a first engagement surface. The rack also includes an elongated billiard ball holder defining an elongated central space configured to support a plurality of billiard balls in contact with one another in a row. The billiard ball holder includes an opening to the elongated central space such that billiard balls can be inserted into the central space through the opening. The billiard ball can be tilted to roll the stored billiard balls through the opening. The billiard ball holder has a second engagement surface configured to removably engage the first engagement surface of the base and retain the billiard ball holder in a generally upright position wherein the elongated central space extends generally vertically. The billiard ball holder is removable from the base to facilitate transport of the billiard ball holder and stored balls to an associated billiards table.
